

R&D SOFTWARE ENGINEER – M/F (Ref. N006. 1)

Telecom Software R&D / Porto, Portugal

Nonius Software is hiring talented software engineers for its R&D department, to work on new and innovative telecommunication projects.

work@nonius:

Nonius Software is a Portuguese Telecom Equipment Manufacturer, which develops and commercializes Internet Access Management Products.

Currently Nonius is developing new Product Lines targeting Wireless Location Services, Satellite Communications Management, Telecommunications Expense Management and IPTV.

Nonius was founded in April 2005, with a fast development and market focus approach, its main product - the WGServer - became a reference product for the Portuguese Hotspot Market and it is now being exported to several countries.

The work is to be developed in a dynamic team where there is opportunity to be involved in the every stage of the product development cycle. A team with high technical capacity, innovative spirit and strong customer focus.

Nonius offers a very complete salary pack that matches the proven experience and the market rates. Nonius offers great opportunities for career development in a fast growing company.
