

# NONIUS.HSIA | BUSINESS CENTER

## PC & MAC SOLUTION

The NONIUS.HSIA Business Center Software provides Hoteliers with control over computer and printer usage.

This software is the client part of a client/server based solution and it can only be used in properties that already have a NONIUS.HSIA solution.

The server part of the solution is the NONIUS.HSIA appliance, that the hotelier already has installed in the property.

The guest authentication and billing of the business center usage will be controlled from the NONIUS.HSIA Appliance.

Control of the usage, will be similar to what the hotelier is already doing to control and bill internet usage for Lobby/Rooms/Conferences.

## KEY FEATURES

- Bills or controls the computer usage time. Pre-paid (using a voucher) or post-paid (using PMS)
- Customizable with Hotel or Brand design using HTML5
